

Columbus Barricade and Safety is a full line distributor of GNR Products.

GNR Technologies® is a full service manufacturer of rubber parking lot safety solutions. We design and manufacture traffic control products that help cars navigate and park safely.

Our main goal has been to create solutions that protect motorists and pedestrians from the peril's of today's parking lots. As such, GNR's products have been designed and developed with speed reduction, driver and pedestrian safety in mind.

All of GNR Products are manufactured from 100% recycled truck tires. Rubber speed bumps or parking blocks, for example, are longer lasting, highly visible, and more car-friendly than asphalt or concrete alternatives. Not only are GNR's traffic safety solutions environmentally friendly, they can also be installed for both temporary and / or permanent use.
